

# Devaning Shelter

## Now you can unload your containers in the rain!

A shelter on wheels you can park up to a container when unloading. This allows you to unload your goods in the rain increasing your productivity and performance. Just wheel it along into position.

Wheel the cover over top of the container to get it out of the way ...or if the container is not there park it back up in your warehouse.

If you like you can have 2 shelters stack together. One is a little lower. A very good way to save space.

The cover is ratchet tensioned – easy to tension and it's not going to blow off!

The castors are heavy duty. Swivels on one end and fixed on the other end. Each castor has its own lock to keep the shelter parked up.
